

# Population Estimates

Series P-25, No. 302  
March 11, 1965

## ESTIMATES OF THE POPULATION OF THE UNITED STATES AND COMPONENTS OF CHANGE: 1940 TO 1965

(This report replaces Current Population Reports, Series P-25, No. 278)

The estimated rate of population growth in the United States in calendar year 1964 was 1.38 percent, as compared with 1.44 percent in 1963. This decrease in the rate of growth represents a continuation of a gradual decline since 1956, resulting principally from a lowering of the birth rate (figure 1). An early postwar peak was reached in 1947, when the rate of population growth was 1.85 percent. The rate then fell to 1.65 percent in 1950 before rising again to a second postwar peak in 1956, when the figure was 1.83 percent. In contrast, population growth in the 2 years immediately preceding this country's participation in World War II (1940 and 1941) averaged only about 1 percent a year.

The trend in population growth is reflected in the estimates of the Nation's population and of the corresponding components of population change shown in table 1. During calendar year 1964, the population including Armed Forces abroad increased by an estimated 2,632,000, or somewhat less than the estimated increase of 2,705,000 in 1963. The peak numerical postwar gain was an estimated 3,058,000 in 1956. In 1940, the estimated numerical increase was only 1,221,000.

There were an estimated 4,097,000 births in 1964, slightly fewer than in 1963 and much fewer than the peak number of 4,332,000 in 1957. The birth rate of 21.3 per 1,000 of the population in 1964 compares with a postwar peak of 26.5 in 1947 (table A). After a drop to 23.9 in 1950, the birth rate increased to 25.2 in 1954 and again in 1957 but has since declined

Table A.--ANNUAL RATES FOR THE COMPONENTS OF  
POPULATION CHANGE: 1940 TO 1964

(Rate per 1,000 of the mid-year population including  
Armed Forces abroad)

Year or period	Net growth rate	Rate of natural in- crease	Birth rate	Death rate	Net civilian immi- gration rate

BUREAU OF THE CENSUS

Figure 1.--ANNUAL GROWTH RATE: 1940 TO 1964

Note: Data relate to the total population of the United States including Armed Forces abroad.

each year. The rate of 21.3 in 1964 is approximately equal to the average for the 1940-44 period. The average rate for the period 1960 to 1964 was 22.6 compared with an average rate of 24.8 for 1950 to 1959.

Deaths numbered about 1,804,000 in 1964, or about the same as in 1963. The 1964 death rate was 9.4 per 1,000 of the population. The lowest recorded death rate was 9.1 in 1954. In the intermediate years, the rate fluctuated between 9.3 and 9.6 without any definite trend. Even when the rates are adjusted for changes in the age composition of the population, no definite trend appears in the period 1954 to 1964; the age-adjusted rate in 1964 was about the same as in 1954 and the intermediate years.

Net civilian immigration has contributed about 13 percent to population growth since 1960. Natural increase, the excess of births over deaths, has contributed 87 percent. The corresponding percentages in the 1950's were 11 and 89. Net civilian immigration averaged 300,000 a year in the 1950's. The largest net gain from this source between 1950 and 1960 was in 1956 when immigration added 387,000 persons to the population. Immigration was swollen at that time by the displaced

persons admitted under the Refugee Relief Act of 1953. There were also many arrivals from Puerto Rico and Mexico. The larger number of immigrants in 1956 helped make it the year with the largest total increase in our history. After falling below 300,000 for a number of years, net immigration swelled to over 350,000 in 1961, 1962, and 1963, principally as a result of the heavy influx of refugees from Cuba and the return of many citizens from overseas. The immigration from Puerto Rico in these years was small, on the other hand. The lowest amount of net immigration since 1950 was recorded in 1952, when the figure was only 242,000.

#### COVERAGE OF POPULATION

This report shows estimates of the population of the United States for each July 1 from 1900 to 1964 and for each month from January 1950 to January 1, 1965, and components of population change from 1940 to 1964. Two series of estimates are given for the period since 1940. One series relates only to conterminous United States, excluding Alaska and Hawaii; the other relates to the entire United States, including Alaska and Hawaii.

Estimates of the population since 1930 are presented according to three concepts--total including Armed Forces abroad, total resident, and civilian resident. The total resident population conforms to the concept of the United States population for which the principal tabulations are made for the census reports. In general, it includes residents of the 50 States and the District of Columbia but excludes residents of the Commonwealth of Puerto Rico, residents of the outlying areas under United States sovereignty or jurisdiction (principally American Samoa, Canal Zone, Guam, Virgin Islands of the United States, and the Trust Territory of the Pacific Islands), and other American citizens living abroad. However, some estimates of the total resident population shown here relate only to conterminous United States, excluding Alaska and Hawaii. The "total population including Armed Forces abroad" includes the total resident population and the Armed Forces stationed in foreign countries and in the outlying areas but not their dependents. The "civilian resident population" represents the total resident population less the Armed Forces stationed in the United States.

Other concepts of the United States population include, in addition to members of the Armed Forces, all or some of the civilian American citizens living abroad. The U.S. civilian population abroad consists of the dependents of the Armed Forces, civilian employees of the Federal government and their dependents, crews of merchant vessels, and other citizens abroad--excluding, for the most part, such classes in Puerto Rico and the other outlying areas. The estimated total population of the United States including Federal employees (military and civilian) and their dependents abroad (but excluding persons not affiliated with the Federal government) was 192,687,000 as of July 1, 1964. This figure includes persons in the classes named residing in the outlying areas. A large part of the civilian population abroad affiliated with the Federal government consists of the dependents of members of Armed Forces.

Estimates of population for July 1, 1964, with the various types of population coverage mentioned, are as follows:

	United States (incl. Alaska and Hawaii)	Conterminous United States (excl. Alaska and Hawaii)
Total population including Federally affiliated persons abroad.....	192,687,000	191,993,000
Total population including Armed Forces abroad.....	192,119,000	191,261,000
Total resident population.....	191,371,000	190,420,000
Civilian resident population.....	189,371,000	188,513,000

## METHODS AND SOURCES OF DATA

The estimates from 1940 to date involved the following computational steps:

- (1) Last census count of population,
- plus (2) Armed Forces abroad on the census date,
- plus (3) resident births,
- less (4) deaths, including deaths to Armed Forces abroad,
- plus (5) net civilian immigration,
- plus (6) net inductions into Armed Forces abroad,
- plus or minus (7) "error of closure" for the intercensal period,
- less (8) Armed Forces abroad on the estimate date, to obtain the resident population,
- less (9) Armed Forces in the United States on the estimate date, to obtain the civilian population

The estimates for earlier years were generally prepared by essentially the same procedures as for the years since 1940.

The Armed Forces components are based on data on the size and distribution of the Armed Forces obtained from the Statistical Service Center of the Department of Defense and from the Army, Navy, Air Force, Marine Corps, and Coast Guard. Reserve forces on a 6-month tour of training and students at the military academies are included in the Armed Forces; reserve forces on shorter tours of training, national guardsmen, and officers in the Public Health Service are not. Crews of U.S. naval vessels in American ports are considered inside the United States; those in foreign ports or on the high seas are considered abroad.

To maintain comparability over time, estimates of the Armed Forces based on the Defense Department data were used for census dates although census counts of the Armed Forces are available.<sup>1</sup>

<sup>1</sup> The census counts of Armed Forces and the percent differences from the estimates based on Defense Department data for 1950 and 1960 are as follows:

	Census count		Percent difference from Defense Department data	
	1960	1950	1960	1950
Total.....	2,366,949	1,312,869	-7.1	-14.2
Inside U.S.....	1,733,402	982,313	-6.8	-12.7
Outside U.S.....	633,547	330,556	-8.0	-18.6
Outlying areas of U.S.....	23,827	28,961	-22.2	-27.1
Foreign country or high seas.....	609,720	301,595	-7.4	-17.8

The component for net inductions to Armed Forces abroad includes an allowance for inductions in Puerto Rico.

Births and deaths for the resident population are tabulated by the Vital Statistics Division, National Center for Health Statistics, Public Health Service. Final tabulations were available for births and deaths through 1963; preliminary tabulations were available through December 1964. The Vital Statistics Division has corrected births for underregistration by factors obtained by interpolating and extrapolating the results of the 1940 and 1950 Birth Registration Tests. The tests were conducted in connection with the 1940 and 1950 Censuses through the joint efforts of the Vital Statistics Division, Public Health Service, and the Bureau of the Census. No similar test has been conducted for deaths. However, the Census Bureau has corrected deaths of children under 1 year old through March 1960 using the same factors as for births. This correction has been dropped from the estimates starting in April 1960 because it has become so small as hardly to affect them. The figures on deaths to members of the Armed Forces abroad include data covering the Korean War obtained from the Department of Defense; deaths of military personnel for other periods have been estimated.

The figures on net civilian immigration for the period since April 1, 1950, are based on statistics of net immigration of aliens from foreign countries and net arrivals of civilian citizen passengers provided by the Immigration and Naturalization Service of the Department of Justice, and net immigration from Puerto Rico provided by the Planning Board of the Commonwealth of Puerto Rico; and on data relating to civilian citizens affiliated with the U.S. Government provided by the Department of Defense and the Civil Service Commission. The statistics specifically include the following categories:<sup>2</sup>

1. Immigrant aliens;
2. Emigrant aliens departing for residence abroad, through June 1957;
3. Net admissions of aliens for temporary residence, through June 1956 (nonimmigrant aliens less nonemigrant aliens);<sup>3</sup>
4. Net arrivals from Puerto Rico;
5. Net arrivals of civilian citizen passengers through March 1960; and
6. Net immigration since April 1960, of civilian citizens affiliated with the U.S. Government.

The Immigration and Naturalization Service stopped tabulating data for nonemigrant aliens after June 1956 and for emigrant aliens after June

1957. Since July 1957 aliens who have had the residence status changed from temporary to permanent have been included in the total for immigrant aliens in the year in which their status was converted. For some of the years since 1957, these immigrants have been allocated back to their probable year of entry. Figures for net arrivals from Puerto Rico and net nonimmigrant aliens were smoothed by use of a moving average to eliminate variations arising from the seasonal movement of travelers.

Data on alien immigration are available only through June 1964; figures for the following months have been estimated. An allowance has been made for Cuban refugees who have come to the United States since April 1960 but who do not appear in the immigration data because they have not yet been granted permanent residence.

The statistics do not include the movement of agricultural workers from Mexico and the British West Indies under special contract. It is believed that they also fail to include some of the aliens entering the country by way of the Canadian or Mexican border.

The category, net arrivals of civilian citizen passengers by ship and plane, which was employed to account for movements of civilian citizens in estimates for the period prior to April 1, 1960, was replaced for the period since that date by the category, net immigration of civilian citizens affiliated with the U.S. Government. The previous item, civilian citizen passengers, shows a persistent excess of arrivals over departures spanning many years, whereas other data suggest an excess of departures in this period. For example, the passenger data indicate a net immigration of civilian citizens of 280,000 for the 1950-60 intercensal period whereas, on the basis of the

<sup>2</sup> These statistics include certain extraneous categories which tend to cancel out as follows:

- a. Immigrants from foreign countries to Puerto Rico and to other outlying areas are counted with the immigrants to the United States in category 1.
- b. Emigrants to foreign countries from Puerto Rico and other outlying areas are counted with the emigrants from United States in category 2.
- c. Immigrants from other outlying areas and foreign countries to Puerto Rico are counted with the emigrants from United States in category 4.
- d. Emigrants from Puerto Rico to other outlying areas and foreign countries are counted with the immigrants to the United States in category 4.

<sup>3</sup> Nonimmigrant aliens are those arriving for temporary residence or returning for permanent residence after a temporary absence; nonemigrant aliens are those departing after a temporary residence or resident aliens leaving with the intention of returning.

counts of civilian citizens overseas in the 1950 and 1960 Censuses and on the recorded births to American parents abroad, there appears to have been an excess of citizen departures from the United States during the 1950's of 172,000. The accuracy of the estimates of net immigration of citizens based on the passenger data depends on the "balancing out" of very large temporary movements, including movements of tourists as well as of U.S. citizens changing their usual residence. For example, in fiscal year 1962-63, the reported movement of citizens to and from the United States was about 2.4 million persons in each direction. Furthermore, the figures on citizen movements cover only movement by sea and air; movements across our land borders with Canada and Mexico are excluded. As a result, deficiencies in the completeness of reporting of the citizen passenger data in either direction or a substantial net movement of citizens into or out of the United States across our land borders could have a considerable impact on the net immigration figure as representing the balance of changes in usual residence.

Estimates of net overseas migration of civilian citizens affiliated with the U.S. Government for the period since the 1960 Census have been derived from data on births in military hospitals abroad and changes in the numbers of civilian citizen employees of the Federal Government abroad and of citizen dependents of Federal employees and servicemen.<sup>4</sup> This basis of estimating net overseas migration of civilian citizens excludes the net overseas movement of citizens not affiliated with the Federal Government. The few data that are available relating to civilian residents abroad who are not affiliated with the U.S. Government are too incomplete or inaccurate to be used as a basis for measuring the migration of this group, and no allowance was made for this movement.

Inductions less discharges abroad represent the difference between the number of persons inducted into the Armed Forces at overseas locations and the number of servicemen discharged from the Armed Forces overseas. Inductions less discharges abroad for each month were estimated as the net change during the month in the number of recruits from abroad who are in the Armed Forces.

<sup>4</sup> The estimating procedure consisted essentially of subtracting natural increase (births) of Americans abroad from the total increase in the number of civilian citizens abroad affiliated with the U.S. Government. For this purpose, the few deaths in the American population abroad, and the balance of U.S. citizens abroad who leave Federal employment but remain abroad and U.S. citizens living abroad who accept Federal employment, were ignored.

The last of the "components" of change listed is the "error of closure." This is the difference between (1) the population as shown by a census count, and (2) the estimate of the population on that date as derived from the previous census count and data on the various components of population change for the intercensal period. For the period 1950 to 1960, the error of closure amounted to 3,000. Since this difference represents the balance of errors in the estimates of the components of change and of the two census counts, some of which may be quite large, the small size of the error of closure should not be taken as a measure of the accuracy of either the estimates of the individual components of change or the census counts.<sup>5</sup> The error has been distributed evenly over the 9 months from July 1959 through March 1960.

The components of population change are shown in table A in the form of rates, i.e., birth rates, death rates, and rates of net civilian immigration, for the population including Armed Forces abroad for each calendar year 1940 to 1964.

The components of change from 1940 to 1950, 1950 to 1960, and 1960 to 1964, according to the three definitions of population, are shown in table B (period totals) and table C (annual averages). The three sets of figures in each table differ only in the treatment of the Armed Forces component. Components of change for the total resident population treat the movement of Armed Forces to and from posts abroad as an additional category of migrants, those for the total population including Armed Forces abroad take account of military deaths and inductions and discharges abroad, and those for the civilian population omit military deaths and take account of inductions and discharges in the United States.

Components of change for the total population of the United States including Armed Forces abroad for each calendar year from 1940 to 1964, each fiscal year from 1940-41 to 1963-64, and each half-year from 1950 to 1964 are shown in table 1. Annual population estimates according to all three definitions, both for the United States including Alaska and Hawaii and conterminous United States, from 1940 to 1965, are shown in table 2; estimates for conterminous United States only, from 1900 to 1939, are shown in table 3. Monthly population estimates from 1950 to 1965 are shown in table 4.

<sup>5</sup> It does, however, indicate the consistency of the change shown by the two types of data and suggest the possibility of a high level of accuracy in the estimate of the amount of intercensal change.

The estimates presented in this report for dates since July 1, 1962, supersede the corresponding estimates shown in Current Population Reports, Series P-25, No. 278, the previous report giving data on the components of population change for the United States. The estimates of the population of conterminous United States for 1950 to 1959 have also been revised to take account of new estimates of the population of Alaska and Hawaii for these years. (Revised intercensal estimates of the population of States will be published shortly in the P-25 series.) The other estimates in Series P-25, No. 278, have not been revised. The estimates for conterminous United States for 1950 to 1959 differ also from the estimates by age in P-25, No. 265, and from the State estimates in P-25, No. 229. The estimates for 1940 to 1949 agree with the estimates of conterminous United

States previously published in Series P-25, Nos. 98 and 139, presenting estimates for age groups and States respectively, or represent the sum of these estimates and those for Alaska and Hawaii shown in Series P-25, No. 80. The estimates of the total resident population of conterminous United States for 1900 to 1939 given in this report are the same as those shown in Series P-25, Nos. 114 and 139.

\* \* \*

The estimates shown in this report have been independently rounded to the nearest thousand from figures completed to the last digit. Hence, the sums of parts shown may differ slightly from the totals shown. Percents and rates are based on unrounded numbers.

Table B.--COMPONENTS OF POPULATION CHANGE: 1940 TO 1950, 1950 TO 1960, AND 1960 TO 1965  
(Includes Alaska and Hawaii in all periods)

Type of population and component of change	April 1, 1960, to Jan. 1, 1965	April 1, 1950 to 1960	April 1, 1940 to 1950	Percent <sup>1</sup>		
				April 1, 1960, to Jan. 1, 1965	April 1, 1950 to 1960	April 1, 1940 to 1950
TOTAL POPULATION INCLUDING ARMED FORCES ABROAD						
Population at beginning of period.....	180,007,000	151,718,000	132,288,000	(X)	(X)	(X)
